

5 New Features in the iPad OS

Highlights

- New Home-screen
- Dark Mode
- New Multitasking features
- 3rd Party Storage compatibility
- Sidecar with Mac OS Catalina

Apple announced a separate OS dedicated to iPads in this year's WWDC. Till last year the iPad used to run on the same iOS that also powered iPhone. However, it did limit the growth of what iPad is capable of doing. This was one of the primary reason why Apple decided to create an OS specifically dedicated to the iPad. This all-new iPad OS adds many new features to the iPad such as new multitasking options, updated home screen, 3rd part storage compatibility and many more.

1. New Home-screen

With iPad OS the widgets now live on the side next to all of your apps. Moreover, your favourite widgets can now also be pinned to the front page which is a pretty handy feature. Furthermore, now you can get more apps on the main screen as apple has added 1 more row and a column to the app's grid. This was made possible by shrinking the icons and making the dock available for further app additions.

2. Dark Mode

Perhaps the most anticipated feature of the iPad is the dark mode. Combined with the new home-screen, this looks stunning in the night. Moreover, you also have the option to automatically enable dark mode after sunset with just a single click. This is quite useful as it means your iPad won't glare at you when you decide you're going to binge-watch something at 11 pm when you actually should be in bed.

3. New Multitasking Features

This is one of the biggest feature that sets the iPad OS apart from IOS. Though for the novice user this can be seen as a bit overwhelming, However, when you get the gist of it, then you can realise how easy they make our lives while multitasking. Apple calls it "Slide Over" which enables you to drag an app from the dock and float it on your screen. Though this isn't a new feature it has several new improvements compared to the existing multitasking on the iPad. Basically now, you can have multiple apps at once in Slide Over. It's a collection of apps you can overlay over the main app you're working in – or over two apps you're using in Split View. You can now also open two simultaneous tabs of the same app as well, For eg. you can open a mail on one side while composing another one.

4. 3rd Party Compatibility

Finally, you can now connect your iPad with pen-drive,

external hard drives or even sync with a DSLR camera directly from your device. There's also a new column view that's reminiscent to the approach used in macOS

5. SideCar (iPad as a second screen)

With sidecar, you will be able to use your iPad with your MacBook as a second screen. This is quite a handy feature that lets you use your iPad as a basic display, but also as a drawing tablet when combined with Apple Pencil, which is bound to appeal to users who use their iPads creatively.

Nubia Red Magic 3 Review

Image Source: gadgets.ndtv.com

Highlights

- Fan based cooling solution
- 90 Hz refresh rate
- Affordable Price
- Long Battery Life
- Refreshed Design
- 128 GB, 8 GB RAM
- Edge-to-Edge Full HD display
- Industry First RGB Strip on back

The idea of a dedicated gaming smartphone has always been attractive, but it's only in the last couple of years that the idea has taken off, thanks to brands like Razer and Asus. Props to the now ever-growing gaming market, new players are now competing for the ultimate gaming smartphone tag. One of them is the 2019 latest entry Nubia Red Magic 3.

Price

Starting at just ₹ 35,999, the Nubia made Red Magic 3 could be a contender for consumer attention simply by the spec sheet alone.

Design

Nubia has taken gaming aesthetics very seriously with Nubia Red Magic 3, This can be seen by RGB strip at the back and dark colors of red and green accent. Surrounded by the aluminium body, the phone looks sturdy and has a gaming vibe to it.

Display

Red Magic is an absolute beast in terms of display, it has a massive 6.65-inch display along with the full HD+ panel and a

resolution of 2340 x 1080 pixels. Furthermore, the 90 Hz refresh rate also makes it run along with the One Plus 7 Pro. Apart from that, colors and contrast are good as well.

Camera

Though being a gaming phone, it's not expected to have groundbreaking camera system. But it does pack in Sony's IMX 586 sensor with the 48 MP rear camera (very same as found in OnePlus 7 Pro). On the front, it has a 16 MP selfie camera. Overall the photos are surprisingly decent. The camera is also able to record "8K" resolution however the catch is that it can only capture 15 frames per second which are significantly lower than the standard video capture.

Features

The performance of red magic 3 is top-notch. It is powered by Qualcomm Snapdragon 866 Octa-core processor along with RAM options of 12/8/6 GB. Its speakers are also pretty loud and capable of high-quality sound reproduction. These speakers are DTS:X/ DTS 7.1 with 3D Sound Capability. The red magic 3 also features a massive 5000 mAh battery with up to 30W fast charging. The back of this smartphone is accented with a series of LEDs shining from within. Near the bottom of the back is the Red Magic logo. Now coming gaming, its where this device sets itself apart. Once you flip the dedicated red switch for gaming, this transforms the phone into a gaming space environment, where all the buttons and gestures are given over to the game. Besides this, the dedicated cooling fan also helps in keeping the temperature cool while intense gameplay. This fan and a channel are made of metal through which air is moved, all above a section of thermal foam. It also has bumper buttons on its side that can be used as the "Floating L" and "Floating R" buttons while playing games. Overall this is a decent gaming phone with significantly high-end spec for a mere ₹ 35,999. Because this phone presents a surprising number of positive features, very

few drawbacks, and a top-notch overall package this phone is highly recommended for gamers.

Key Specifications –

- Screen – 6.65 inch AMOLED Display at 1080 x 2340 resolution
 - Processor – Qualcomm SDM855 Snapdragon 855, Octa-core
 - Memory – 256 GB, 12 GB RAM, 128 GB, 8 GB RAM or 64 GB, 6 GB RAM
 - Rear camera – 48 MP (capable of shooting 8K at 15fps)
 - Front camera – 16 MP
 - Battery – 5000 mAh
 - Charging – Fast battery charging 30W
 - Software – Android 9.0 (Pie)
 - Biometric security – Fingerprint (rear-mounted)
-

iPhone XS Review

Image Source: skymartbw.com

The iPhone Xs and Xs max are the latest phones launched by apple last year. These phones also have brought much needed feature upgrades that were needed by apple's previous flagship models. Though compared to current set of choices among smartphones, the iPhone XS isn't a winner in all aspects but it does strike a right balance when it comes to screen size and body ratio which is very important for user experience now a days.

Though when its predecessor iPhone X was launched, apple set a standard for majority of flagship devices by managing to pack edge-to-edge display, replacing the top bezel with a notch and doing away with the home button. This year as well, apple has managed to woo the competition by making iPhone Xs more powerful by using its A12 bionic processor, IP68 water protection and a massive 5.8 inch super retina display. Apart from that apple has also added a brand new gold colour to its current line up which honestly looks really good and has a premium appeal to it.

As far as the camera is concerned, the iPhone Xs has a dual camera setup (wide-angle lens and telephoto lens) which is capable of shooting 4K videos at 60fps. On the front side it sports a 7MP – TrueDepth camera which can shoot photos and videos at 1080p. This year's iPhone also comes with dual sim capability but with a twist i.e the iPhone XS only accepts the combination of Nano-SIM along with eSIM card.

Furthermore the iPhone Xs comes in 3 beautiful finishes – Gold, Silver & Space Grey along with 3 storage options – 64GB, 256GB and 512GB. Though a 128GB option would be much better as I think now a days, 64GB wont be enough to use iPhone Xs at its full capacity.

Coming to its design, this year's iPhone with the surgical-grade stainless steel but the screen and rear glass has a new

formulation of glass which Apple says is the toughest ever used in a phone. The water-resistance has also been improved to IP68, up from IP67, therefore allowing it to be submerged at a depth of 2m for upto 30 minutes.

Performance wise, the all new A12 bionic processor is 15% faster than the previous A11 chip. With 8 cores, it is also 50% faster in terms of graphics performance and has 50% lower power usage in efficiency cores. According to apple the A12 chip is capable of processing upto trillion operations per second, considerably up from the 600 billion which the A11 could handle. This amount of powerful processing will also allow us to see more augmented reality based apps in the future. Moreover battery life has also been improved a little bit, allowing an additional 30 min extra screen time.

Key Specifications –

- Display – 5.80-inch (1125 x 2436)
- Processor – Apple A12 Bionic
- Front Camera – 7MP
- Rear Camera – 12MP + 12MP (Wide-angle and Telephoto lens)
- Storage – 64GB, 256GB, 512GB
- iOS 12
- Price – Starting from ₹99,900

Apple Watch Series 1 Review

Apple Watch Series, the wearable technology lineup of Apple, that started in 2015 has become immensely popular among all the generation. With over 50% Market share, It has clearly dominated the wearable technology Sector. As long as you're expecting iPhone tied convenience gadget, Apple watch is a fantastic piece of technology and is more focussed towards people who are fitness oriented.

Design

The Apple Watch comes in 2 standard sizes : 38mm and 42mm , both are identical with the only difference in the screen resolution. Apple Watch starts from Rs.18994 onwards all the way to over 1 lakh depending upon the material you choose (Aluminium, Stainless Steel, Ceramic and Gold).

Display

Apple Watch uses the OLED technology. With OLED only the pixels used are turned on, and fewer pixels equals less battery drain.

Lightweight

Personally after wearing it for a while I really loved that

unlike other tech watches, it doesn't feel heavy. Indeed with its gorgeous design, it also has that premium feeling that I really liked a lot

Call

I don't really use this feature quite a lot but apple do provide support for calling. The only downside is that you need to have iPhone within a certain range to make it functional.

Music

This is one of the feature that I use quite frequently. The UI is pretty intuitive and with its seamless integration with the iPhone Music. I can easily listen up all my favourite tracks on the apple watch as well.

Health

Equipped with the heart rate sensor, It automatically records my heartbeat, calories, step-count. Personally this is one of the best feature for someone who is a fitness freak and like to keep track of his/her health activities

Mail

The Mail functionality is pretty neat as it allows you to

check mails on the go. It also notifies you with its Taptic engine whenever a new mail comes in.

Messaging

The Messaging app in general is nice. It easily notifies you about any messages from any social platform such as WhatsApp, iMessage, Messenger etc. No Doubt, Apple Watch is a great piece of technology and after using it for a while I personally feel that although its is really useful in fitness related activities and in general as well. However the only drawback I do feel is that the battery runs out pretty quickly , therefore you need to charge it up in the night in-order to use it the next day but overall I really liked it.

Key Specifications

- Internal Storage and RAM – 512 M | 8 GB
- Water Resistance – IPX7 water resistant
- Display – 390 x 312 pixels, 303 ppi OLED display
- Display 3D Touch Support along with brightness upto 450 nits
- Processor – Dual-core 520 MHz Cortex-A7 and Apple S1P Chip

iPad Pro (11 inch) Review

Image Source: mspoweruser.com

What's New

- Completely Redesigned iPad
- Comes in 12.9 and 11-inch variant
- A12x Bionic Octa-core processor
- Edge to Edge display
- 2388 x 1668 pixels, 264ppi Retina LCD display
- Face ID
- USB Type C port
- Up to 1 TB internal storage

Apple released two very interesting tablets last year, that could be one of the best tablets ever made. With its all-new design, edge to edge display, Face ID, 4 speakers, USB type C Port it packs quite a lot of features. From specs, impression and design. Here's everything you need to know about the iPad Pro 2018 model.

Price

In India, the 11-inch iPad Pro (non-cellular version) starts at around ₹ 71,900 with 64 GB storage and crosses 1 Lakh mark for 1 TB storage at ₹ 1,39,900. While the bigger model (12.9 inch) retails at Rs. 85,900 for the base 64 GB storage option.

Design

Since its release, the iPad has looked pretty much the same. However, I am glad that 2018 was the year of change for the iPad for its biggest makeover yet. Following the design of the iPhone X, the iPad no longer features a physical home button nor a 3.5 mm headphone jack. This was indeed replaced by a seamless liquid retina edge to edge display which in my opinion looks much better. This also makes the previous generations iPad look outdated in terms of design. Though the bezels aren't overly small this gives you a little bit extra room to hold the tablet without touching the screen accidentally. The iPad Pro also comes in 2 sizes (11 and 12.9 inches) along with 2 beautiful variants – silver and space grey.

Display

The iPad Pro features a 264ppi “Liquid Retina Display”, which quoting from apple, allows the screen to “follow the curves of the device, while a new backlight design allows the display to extend into the corners.”. Moreover, the iPad also packs in apple's ProMotion display allowing a refresh rate of up to 120 Hz, thus allowing gamers and designers to experience a much faster refresh rate while using iPad Pro. At the same time, the viewing angles are also very wide and colour reproduction is excellent. Overall the edge to edge display is outstanding and accounts for much better user experience.

Camera

On the backside, the iPad pro has a 12 MP camera (which I find slightly more protruding) whereas there is a 7MP true depth camera on the front. Though I think the back camera in

comparison, gained only minor improvements, retaining the same 12 megapixels as the previous generations iPads. Apart from that the camera is equipped with Smart HDR and is also capable of recording 4K video at up to 60fps which is double the frame rate from last year.

Features

Powered by A12X bionic chip and a 7-core GPU, the graphics performance of the iPad Pro has been 2x than the last year's iPad. The iPad Pro also comes with Face ID which Apple says is more fast and secure than the Touch ID used in its predecessors model. Moreover, the Face ID is also capable of recognizing the face in both portrait and landscape mode which I find pretty handy. Furthermore, the introduction of USB type C which allows iPad Pro to connect to an external monitor, transfer images from memory cards into Photos, use a wired keyboard or even connect to an Ethernet network. As for audio, the new iPad Pro models come with a four-speaker setup that houses two woofers and two tweeters offering wider stereo sound.

Overall, all the aspects of the 2018 iPad pro are pretty good. Liquid Retina display, 120 Hz refresh rate, the cameras, Face ID, Stereo Speakers all makes it one of the best tablet out there. Though the only downside is its pricing which as mentioned earlier crosses the ₹ 1 Lakh + mark thus making it accessible to only people with a high-end budget.

Key Specifications –

- Display – 12.9 inches (2048 x 2732 pixels)
- Processor – Apple A12X Bionic Processor
- Front Camera – 7MP
- Rear Camera – 12MP, HDR
- Storage and RAM – 1 TB, 6 GB RAM or 64/256/512 GB, 4 GB RAM
- iOS 12

- Colours – Silver, Space Grey
 - Price – Starting from ₹99,900
-

Top 6 Features in iOS 13

Image Source: news.yahoo.com

Highlights

- Dark Mode
- Revamped Reminders App
- New privacy features
- New video editing tools in Photos App
- Quick Path Keyboard
- Fully functional browser experience

Apple released the annually iPhone update with iOS 13 at this year's WWDC. This next edition of the company's mobile

operating system looks like quite an upgrade for both developers and users. Though this is not a public beta release, meaning you won't be able to install it before iOS 13 gets stable. We have made a list of the top 6 features that makes iOS 13 worth upgrading to.

1. Dark Mode

Yes, the dark mode finally makes its entry to the iPhone. This was perhaps the most requested iOS feature of all time. The dark colour scheme is easier on the eyes and seems like a great way to use your iPhone, especially in low-light conditions. Moreover, apple also has implemented a feature allowing to automatically on the dark mode after the sunset and turns off at the sunrise which is quite a handy feature.

2. Revamped Reminders App

Apple has also revamped the reminders app with a lot of features. All apart from a new user interface, there are now Smart Lists headlining the redesigned interface, which cleverly break your tasks out into groups by what needs doing Today, Scheduled, Flagged. Moreover, your list can now also have photos, links and documents in it. Furthermore the reminder now automatically fetches the date, time and the contact mentioned in the list and can later remind you about that on that particular time, a pretty neat feature.

3. New Privacy Feature

Perhaps one of my favourite one, Apple announced that it will be launching a "Sign in with Apple" privacy feature which will allow users to create an account on websites with there apple id. Though what makes it interesting is that unlike Google and Facebook, it won't be storing any sort of information about the user, which also means that you won't be bombarded with those smart ads that consume your personal information or those marketing email that you never subscribed up for.

4. Video Editing Tools in the Photos App

With iOS 13, you can finally edit videos right inside the photos app. All those photo editing features of iOS 12 have made their way to videos as well. That means you can rotate, crop and even change the colour settings of the videos. iOS 13 now makes it easier to make quick edits to that footage, which is great for quick YouTube or social media videos.

5. Quick Path Keyboard

Remember installing those 3rd party apps like swiftkey to draw across the keyboard to type words? iOS 13 has built that right into its keyboard. Moreover, using your history of typing, it also gets smart at predicting your sentences which is pretty cool. This also results in way quicker and accurate typing than ever before!

6. Safari just got better

With iOS 13, you can now download videos, photos and documents right from the browser i.e no need for external 3rd party file manager to download your files anymore. This also follows up with updated safari's browsing experience which includes favourites, frequently visited websites, and the websites you've recently viewed along with an updated start page design.

Xiomi MI 9T Review

Image Source: www.xataka.com

Highlights

- In display fingerprint sensor
- Triple lens camera setup
- 403 ppi AMOLED display
- 64/128 GB, 6 GB RAM
- Edge-to-Edge display
- Motorised selfie camera

Xiomi's latest smartphone MI 9T smartphone was recently launched on 12th June 2019. The phone comes with a massive 6.39-inch display with a resolution of 1080×2340 pixels. Confusingly, it's not the first time we've seen the MI 9T either, as it's a renamed version of the Redmi K20, which was revealed in China this May. Let's take a closer look at the MI 9T.

Price

Although it has been launched in Spain where it costs around \$370, However, it hasn't been launched in India so far. According to rumours its expected launch date is 31st July 2019 with the price tag of ₹ 25,890 for the 6 GB RAM/ 64 GB base variant.

Design

The Xiaomi MI 9T comes in 3 variants – Carbon Black, Glacier Blue and Flame Red. It also sports the industry-standard gorilla glass 5 pane on the front along with the full notch-less edge to edge display. On the back of the MI 9T has an eye-catching flame-like design, which has been created using a nano-holographic method which looks super cool. The front-facing selfie camera has been replaced by the latest motorised style popup camera as seen on OnePlus 7 pro and Oppo Reno.

Display

Xiaomi MI 9T has a 6.39 inch AMOLED screen with 2340 x 1080 pixel resolution. Moreover, this time Xiaomi tried its best to provide the best user experience which is visible from the fact that there is no notch or a punch-hole design and a relatively modest chin.

Camera

Xiaomi has adopted the triple-lens camera system consisting of 48 MP wide lens, 13 MP ultra-wide lens and 8 MP telephoto lens. Moreover props to Xiaomi's artificial intelligence features, they have also added a new night mode feature which can take significantly better low-light shots than its predecessors. The selfie camera on the front is powered with the 20 MP lens. Along with the in-display fingerprint sensor, this camera also supports face unlock thus making it convenient for the users who prefer facial recognition.

Features

Despite being a mid-range product, the Xiaomi MI 9t is powered by the Qualcomm 730 processor along with 6GB RAM and storage option of 64/128 GB. The phone also uses the optical in-display fingerprint sensor which uses optical light to sense the grooves on your fingers. Besides this If you are a gamer then you'd also like the fact that Xiaomi has also added a game turbo 2.0 enhancement which makes the gaming experience better by reducing latency and response time. This time its also equipped with 3.5 mm headphone jack, Bluetooth 5.0 and comes with a 4000 mAh battery along with 18w fast charging. Overall if you are looking for a mid-tier smartphone but also want most of the high tech features than this phone is for you!

Key Specifications –

- Screen – 6.39-inch AMOLED display at 1080 x 2340 resolution
- Processor – Qualcomm SDM730 Snapdragon 730, octa-core
- Memory – 64/128 GB, 6 GB RAM
- Rear camera – 48 MP + 8 MP + 13 MP (wide + telephoto + ultra-wide)
- Front camera – Motorised pop up 20 MP
- Battery – 4,000mAh
- Charging – Fast battery charging 18W
- Software – MIUI 10, Android 9.0
- Biometric security – Fingerprint (in-display)

Huawei P30 Pro Review

Image Source: cellucity.co.za

Highlights

- In display fingerprint sensor
- Triple lens camera set up
- Gorgeous Design
- Corning gorilla glass 6
- Reverse Wireless Charging
- 6.47 inches OLED display

With the launch of Huawei P30 Pro is a statement from Huawei, with the Chinese smartphone manufacturer declaring that its new flagship will “rewrite the rules of photography”. Furthermore, its high tech specs such as in-display fingerprint sensor, massive battery life, OLED display and its premium built quality also makes it one of the most promising

phone of 2019. Let's find out more about this phone.

Price

In India, the Huawei P30 Pro is priced at ₹ 71,990 for its top-end variant of 8 GB and 256 GB internal storage. Though it another variant also comes with slightly lower specs such as 6 GB and 128 GB internal storage.

Design

On the front of the P30, Huawei has slimmed down the small notch at the top of the display. This has also enabled Huawei to increase the size of the screen from 6.1-inch to a larger 6.47-inch OLED display. Coming to its design, the P30 pro looks stunning with its colourful and vibrant shades. In total, the P30 Pro is available in five finishes, known as Breathing Crystal, Amber Sunrise, Pearl White, Black, and Aurora. Huawei is also kind enough to include a silicone cover case for the phone which helps to have a better grip.

Display

The Huawei P30 Pro packs in a 6.47 inch OLED display with the resolution of 1080 x 2340 pixels with 398 PPI pixel density. This also allows P30 Pro to produce more vivid, vibrant and colourful imagery and videos making it an overall enjoyable experience for the consumer.

Camera

This time, Huawei has rebuilt its entire camera system from the ground up. The device has a Superzoom Lens, a 40 MP Super Sensing Camera, a 20 MP Ultra-Wide-Angle Lens and a HUAWEI TOF Camera, which allows you to capture incredible moments. Backed by Leica uad Camera System, the phone is capable of clicking excellent pictures even in low light conditions. So if you're looking for a truly unique smartphone camera experience this might just have to be your next phone. On the front, it has a

32 MP selfie camera which is also capable of shooting amazing pictures in the low light condition.

Features

The Huawei P30 Pro uses the flagship Kirin 980 chipset that debuted last year. P30 Pro also boasts fast-wired and fast-wireless charging, as well as the reverse wireless charging which is quite a handy feature. Talking about battery it is loaded with the massive 4200 mAh battery along with 15W fast charging which can charge your phone from 0 to 70% in just 30 mins. Huawei also uses in-display optical fingerprint sensor which uses optical signals to recognise your fingerprint pattern. Overall P30 Pro is a compelling alternative to heavyweights of Apple, Google and Samsung. The storage is also huge to fulfil the user's storage needs. Therefore it presents a strong spec-sheet that would be appreciated by all the Huawei fans.

Key Specifications –

- Screen – 6.46 inch OLED Dewdrop display
 - Processor – HiSilicon Kirin 980
 - Memory – 6GB/8GB/12GB
 - Rear camera – 40 MP + 20 MP ultra-wide sensor + 8 MP telephoto sensor
 - Front camera – 32 MP
 - Battery – 4200 mAh battery
 - Charging – Fast wireless charging 15W
 - Software – One UI, Android 9.0
 - Internal storage – 256 GB, 8 GB RAM
 - Biometric security – in Display Fingerprint sensor
 - Water Resistance – IP-68 Water Resistance
-

Asus Zenbook Pro Duo Review

Image Source: www.asus.com

Highlights

- Brilliant Aesthetics
- High-Quality Design
- Upto core i9 8-core CPU

- Multi-purpose extra screen
- Reverse Wireless Charging
- 6.47 inches OLED display

Introduction

These days, everyone wants to get their hands on a prosumer laptop, whether it's a MacBook Pro or a Dell XPS 15. However, Asus has taken a different route here, more specifically with its new Asus Zenbook Pro Duo has taken laptops to a whole new level with a second "Screenpad Plus" display above the keyboard. With Intel i9 and Nvidia RTX 2060, this laptop is a beast with a unique design.

Price

As of now, no price information is available about this laptop, However according to reports, it will start shipping in July itself. Though it is pretty obvious that with the kind of specs it's packed with, it will be a pretty expensive piece of technology.

Display

A first glance at the Zenbook pro duo , you'll be immediately struck by a stylish finish and a premium design construction. The body is all aluminium to make more sturdy and increase its durability. Though what makes it unique is the second screen that stands out the most. This screen is a 14-inch 4k panel. This screen has a lot of uses, For example, the photoshop users can use this screen as a control centre to access various tools and improve productivity. For gamers, this screen can be used to display stream chat or a view of there ongoing recording. Moreover, this screen also has the support for the stylus which designers may find interesting. Apart from that the whole structure of this laptop also has ergonomic improvement to ensure a comfortable position while you are using it.

Performance

The Zenbook pro duo has up to an 8-core Intel Core i9 processor paired with RTX 2060 GPU and 32 GB of RAM. Furthermore, it also has 4 microphones and an echo style blue light that activates on voice command. Besides this, it has one thunderbolt 3 port, 2 USB- A ports, a full-sized HDMI port and a headphone jack. Given the amount of internals it has, it's fairly a heavy laptop at 2.5 kg. Overall it's certainly going to be a fairly expensive laptop whenever it launches. However, with this kind of hardware internals, it does make it pretty reasonable. Furthermore its also exciting to see another company apart from apple to move forward with a new approach towards a secondary panel for increased productivity.

Key Specifications –

- Screen – 15.6 inch 3840×2160 resolution display
- Processor – intel i9, 8-core processor
- RAM – 32 GB
- Internal Storage – 1 TB SSD
- Weight – 2.5 Kg
- Graphics – 6 GB Nvidia RTX 2060
- OS – Windows 10

Amazon Echo Show (Gen 2)

Image Credits: www.techadvisor.co.uk

Highlights

- Big responsive touch screen
- Powerful Audio
- Friendly and Attractive design
- Compact Size
- Entry-Level Price

Introduction

Amazon launched its 2nd Generation of echo show which feels like a more sleeker, louder, and features loads of new touch-screen features, all for the same price of its 1st generation echo show. Moreover, it also addresses nearly all of the issues with its original model, with the promise of even more useful features in the future. Let's find more about this Amazon's latest echo product.

Price

The 2nd generation of Echo show is priced at same \$229 tag or ₹ 22,999 in India. This also makes it the most expensive echo

product by Amazon. Though the best time to buy this will be the frequent Amazon's sale events where you can easily get a nice discount for the echo show.

Design

In terms of design, the 1st generation echo show was nothing flashy. It was all sharp edges surrounded by black plastic which was easily prone to fingerprints smudges and generally boasted an uninspired look. Though the 2nd generation of Echo Show has an all-screen front with thick black bezels and speakers have been shifted to the back. This has made the Echo Show 17mm thicker than its predecessor, this way it gets more real estate for the display and speakers. Overall it looks like a futuristic mini television, that rests on your desk with that hump on its back.

Display

Since Amazon has moved the placement of its speaker, the new echo show with 1280 x 800 resolution looks much more like a miniature flat-screen TV. Moreover, the colours are now more bright and vivid which also makes the overall viewing experience nice. Furthermore, I think we can expect a sharper display in the future since technology is rapidly getting better.

Sound

Amazon Echo Show features upgraded side-firing speakers which can fill a room with sound quite easily. The music is louder and clearer than any Amazon speaker so far. The echo show also displays the song lyrics while playing the music which is a pretty handy feature. Moreover, since Amazon has partnered with Dolby, therefore you can be sure that the sound will be quite good with its 10.1 inch HD screen.

Features

Aside from the new display and audio, the Intel Atom-based Echo Show has a few other new specs and software enhancements of note. You can also access those smart home devices directly with a swipe on the display. Furthermore, there also and 5 MP camera for HD video calling. You can also use Skype aside from directly using Amazon's built-in video calling interface for echo devices. Apart from that there total eight microphones on the Echo Show which makes it more responsive to your voice commands. The 2nd generation echo show also comes with the browser so browsing google and YouTube is now possible. Besides this, the Amazon prime video content is also available at your fingertips which is quite useful. Overall the new Echo Show now comes with beefier sound and a larger display than the original. Though I think there is still a room for improvement in terms of its sound quality and its software part too. But nonetheless, the new Echo Show is well-poised to be the essential kitchen device if you're an Amazon and Alexa devotee.
